Advanced OEM CW Laser Diode Driver

Description:

The LDD-1303 is a current source designed to precision-drive laser diodes in continuous wave applications. Its power converter topology allows for an output voltage smaller, equal, or larger than the input voltage. This enables the LDD to drive laser diodes with up to 120 V compliance voltage from a single 48 V power supply.

The LDD-1303 offers various safety features, including two inputs for laser diode temperature monitoring.

The device can be fully digitally controlled, the firmware is upgradeable and various digital communications interfaces are available.

A 0 - 10 V analog Input as well as a 0 - 10 V analog output are integrated. Additionally, Laser Power Control using a photodiode is possible using the on-board photodiode amplifier (optional).

Laser Diode Driver:

- Output Current: 0 - 20 A, < 0.4% Ripple
- Compliance Voltage: 1 - 120 V

Input Characteristics:

- DC Input Voltage: 10.5 to 48 V

Main Features:

- Internal Generators: Nominal Current
- Error: Ultra-Fast Switch-off for optimal LD protection
- Configuration / Diagnosis: via USB / RS485 / RS232 TTL
- Dimensions (L x W x H): 190 mm x 70 mm x 28 mm
- Efficiency: > 95 % (@ > 50 % Load)
- Cooling: Over Base Plate

Communication Interfaces:

- USB 2.0
- RS485
- RS232 TTL

Other Features:

- 2 Temperature Sensor Inputs for NTC Thermistors
- Light Measurement Input for Photodiode (LPC Option)
- 0-10 V Analog Input
- 0-10 V Analog Output
- Interlock Input

Digital I/O Configurable Features:

- Enable
- LDD Run Output
- And more configurable functions

Absolute Maximum Ratings¹

Supply voltage (DC)	53 V
Supply current (DC)	53 A
Output current	25 A
Output voltage	130 V

Operating Ratings

Device Connectors Overview

USB Connector X5 and X11

The LDD-1303 can be equipped with a vertical and/or a horizontal USB-Connector (See “LDD-1303 Ordering Information”). If both USB-Connectors are soldered in only use one connector at a time. Otherwise, serious damage to the USB Host may occur.

2	Photo Diode Cathode	5	NTC 1 A
3	NTC 2 A	6	NTC 1 B

Mounting holes Position

The four holes in each corner can be used to mount the device onto a heatsink. Hole diameter =3.2mm.
A 3D model of the device is available on our website.

Laser diode, temperature probes, power supply and connectors not included.

Current-Controlled Operation-Modes and Communication Option

The LDD-1303 is an OEM high performance current source that is primarily designed to operate in CW mode. It is configured over an industry-standard RS485, RS232 TTL or a USB connection, either GUI-driven using the included LDD Service Software, or by direct parameter control using the predefined communication protocol. Basic system status is visually indicated by on-board LEDs, more detailed status information can be polled at any time. The LDD-1303 can operate in a stand-alone configuration as well as in a remotely controlled manner, with parameters adjusted on the fly. The laser diode driver is current-PID-controlled.

Configuration parameters further include: Control source selection, maximum current limits, nominal current ramping, PID controller settings, NTC temperature sensor modeling coefficients, measurement circuitry calibration, error thresholds, etc. Please refer to the user manual for further information.
